BONIRE CONCEPTS ART

WEBSITE DRAWING PLAN

A visual blueprint for a premium automotive design and innovation studio website.

Black and white visual language, restrained electric-blue accents, curated vehicle imagery, controlled access to confidential project materials, and clear routes for commercial enquiries and supporters.

CORE PURPOSE
Present original automotive concepts professionally while protecting valuable research, design development, and intellectual property.

PUBLIC EXPERIENCE
Four to five selected images per vehicle, a concise description, project status, and clear next-step buttons.

PRIVATE EXPERIENCE
Visitors request access, the studio reviews applications, and approved users receive access to a private project page with selected materials.

Planning status: Proposed structure for review before visual design and development. Vehicle names and categories can be updated as the portfolio is finalized.

01 | Site map & design principles

The website should feel like an independent automotive design studio, not a generic image portfolio or crowdfunding page.

Primary navigation

HOME	PROJECTS	ABOUT	PARTNERSHIPS	SUPPORT US	CONTACT
Studio vision Featured work	Vehicle concepts Project detail pages	Founder Studio mission	Manufacturing Engineering Investment	Financial Technical Strategic support	General enquiries Studio contact

Visual direction

Palette	Black and white foundations with electric blue for primary actions and selected highlights.
Typography	Modern sans-serif; strong headings; readable body text; generous spacing.
Imagery	Large, high-quality vehicle renders; only 4–5 public images per project.
Interaction	Clear buttons, short forms, explicit project status, and responsive mobile layouts.
Protection	No public price list, detailed research dump, complete CAD, engineering drawings, or confidential findings.

Recommended top-level visitor journeys

Visitor goal	Journey
Explore a vehicle	Projects → Vehicle page → 4–5 images + summary
See design process	Vehicle page → Request access → Manual review → Approved private page
Acquire or license IP	Vehicle page → IP enquiry form → Private discussion and agreement
Manufacturing or investment	Vehicle page → Partnership enquiry → Review → Meeting and agreement
Support the studio	Support Us → Select support type → Submit proposal → Review and follow-up

02 | Homepage wireframe

A simplified desktop wireframe. The same sections should stack vertically on mobile.

ABOUT THE STUDIO | CONTACT | SOCIAL LINKS | PRIVACY | TERMS	

Homepage priorities

1. Establish the studio's identity immediately. 2. Put the strongest project image above the fold. 3. Route visitors to Projects, Partnerships, or Support without clutter. 4. Avoid claiming production readiness unless supported by evidence.

03 | Individual project page

Each project gets its own page. Keep public content selective and make every action project-specific.

PROJECT NAME | VEHICLE CATEGORY
[IMAGE 1: HERO THREE-QUARTER VIEW]
[IMAGE 2] [IMAGE 3] [IMAGE 4] [IMAGE 5 OPTIONAL]
Short public summary Explain the intended purpose, audience, and design direction in a few sentences. Do not disclose sensitive research or engineering detail.
Project status Concept Design / Advanced Design / Engineering Development / Prototype Development. Select only the status that accurately describes the project.
[REQUEST DESIGN PROCESS ACCESS] [IP ACQUISITION / LICENSING]
[MANUFACTURING / INVESTMENT PARTNERSHIPS] [SUPPORT THIS PROJECT]

Private design-process access flow

1. REQUEST	2. REVIEW	3. APPROVE	4. PRIVATE PAGE
Visitor submits identity, organization, purpose, and project.	Studio assesses legitimacy and intended use.	Studio approves or declines; confidentiality terms may be required.	Approved user receives authenticated access to selected materials.

Implementation note: this requires real access control, not just an unlisted URL. Use individual accounts or expiring, revocable access links and remove access when needed. Confidentiality agreements should be handled separately where appropriate.

04 | Support page & Early Supporters

Position support as participation in building an independent Nigerian automotive design studio, not as charity and not as an automatic investment.

SUPPORT OUR VISION

Help advance original automotive design, research, and mobility concepts from Nigeria.

[BECOME AN EARLY SUPPORTER]

FINANCIAL SUPPORT Contributions toward stated studio or project purposes.	**TECHNICAL & PROFESSIONAL** Skills, software, tools, equipment, services, or facilities.	**STRATEGIC & INSTITUTIONAL** Research, exhibition, engineering, and industry collaboration.

Early Supporter recognition

Benefit	Proposed arrangement
Public listing	Name or organization listed with consent; anonymous option available.
Recognition	Early Supporter designation based on defined programme criteria.
Exhibitions	Complimentary access to designated Bonire Concepts Art exhibitions, subject to capacity and event terms.
Updates	Selected project milestones and studio updates.
Future engagement	Invitations to selected activities where appropriate; not guaranteed contracts or returns.

Supporter terms must clearly distinguish contributions from investments. No automatic equity, IP ownership, repayment, or financial return is included unless a separate written agreement expressly provides it.

05 | Forms, private access & launch checklist

Forms should collect only the information needed to qualify enquiries and support useful follow-up.

Core forms

Form	Key fields	Next step
Design access	Name, organization, work email, country, project, reason for access, intended use.	Manual review; approve or decline; grant private access.
IP enquiry	Name, organization, email, project, acquisition or licensing, intended use, message.	Contact for private discussion and written terms.
Partnership / investment	Organization, role, project, type of partnership, capability, proposed contribution.	Review, meeting, diligence, agreement.
Support proposal	Name, email, country, support type, amount or in-kind offer, preferred purpose, listing consent.	Review proposal, agree terms, acknowledge contribution.
Contact	Name, email, topic, message.	Route to appropriate studio contact.

Essential functional requirements

• Mobile-first responsive layout and optimized high-resolution vehicle imagery.

• A content management method so the studio can add projects, update status, and change public images without rebuilding the site.

• Admin notifications for form submissions and a secure record of enquiries.

• Protected private project pages with individual, revocable access. Do not rely on hidden URLs alone.

• Consent before publishing supporter names or logos, plus privacy and data-handling notices.

• Spam protection, secure form handling, backups, and role-based administration.

• No public prices; use project-specific enquiry forms and follow-up meetings.

• Separate support contributions from investments and record how designated funds are used.

Suggested implementation sequence

Phase	Deliverable
1. Confirm content	Finalize project names, categories, descriptions, public status, and selected images.
2. Design	Approve homepage, project page, Support page, and mobile layouts.
3. Build	Implement forms, content management, email notifications, and private access controls.
4. Test	Test mobile experience, access permissions, forms, privacy, and admin workflows.
5. Launch	Publish, monitor enquiries, and improve pages using real visitor behaviour.

Open items before development: confirm AMI's category and naming; confirm the additional project visible in the original sketch; decide whether support contributions are general, project-specific, or both; select the initial 4–5 images for each project.
